Unicarrier Nomad

Outdoors, the Nomad is a rugged workhorse forklift that's ideal for demanding applications on any improved surface. Indoors, it's a highly agile machine that easily maneuvers in tight spaces — but its unique capability to move from one environment to the other is what really sets it apart.

If this sounds like a forklift that would work in your environment, give us a call!

Tim the Mechanic:

“Forklift Attachments, an safer way to get the job done”

Attachments allow your forklift to become more efficient and versatile with handling unique material handling products. An attachment can enable a lift truck to push, pull, clamp, lift, side shift and rotate any load imaginable. Operators must be trained in the proper use of attachments because they alter the performance of the forklift. Attachments affect the truck's performance by changing its center of gravity, visibility, and capacity. The weight of the attachment reduces the lifting capacity of the truck.

Speak to your tech or ask for a sales rep if you would like to purchase an attachment for your unit.
